

1

Make it yours

Make one visible change, then try it out.

- 1 Near the top of green **on start**, find the sky colour and **set player to sprite**.
- 2 Choose the bucket OR the sky. Click its picture or coloured circle.
- 3 For the bucket, recolour a few pixels. **Keep some solid pixels so it can catch.** Click **Done**.
- 4 Restart the game. Can you see your change and catch a shiny thing? Try the other edit if you like.

YOU'LL KNOW IT WORKED

You can point to your change and say what you chose.

WATCH OUT

Test that you can see the crow and catcher against your chosen sky.

TRY A CHALLENGE

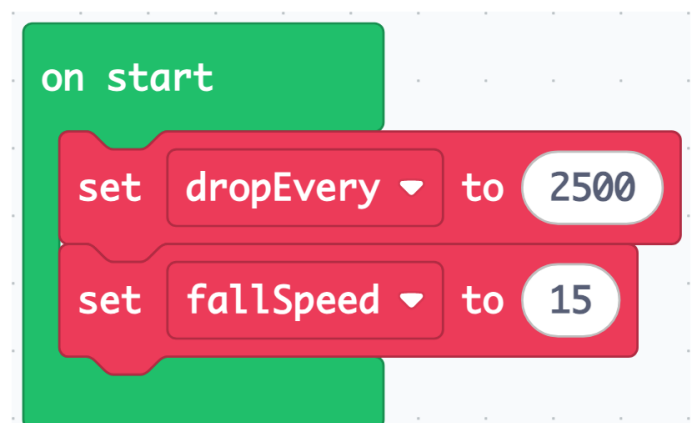

Draw a new catcher. Does its shape change how it catches?

2

Find your fun

Choose your game's feel: relaxed, busy or tricky.

- 1 Find the first two red variable blocks in **on start**. Choose **one** setting to change.
- 2 **dropEvery** : smaller means more frequent loot. Try **700** instead of 2500 as one experiment.
- 3 **fallSpeed** : larger means faster falling. Try **60** instead of 15 as another experiment.
- 4 Predict what will happen. Change **one number**, restart and test for 20 seconds. Keep it or adjust it.

These are starting settings. Your design can be relaxed, busy or tricky.

YOU'LL KNOW IT WORKED

You can explain: changing this number caused ___ to happen.

WATCH OUT

Change **one** number at a time, or you won't know which one did it.

TRY A CHALLENGE

Compare a relaxed and a frantic version. Test each for the same time.

Right now you can only lose. Give the player a way to win.

- 1 Click **Info** in the toolbox. Drag out **on score 100** and drop it on an empty part of the workspace.
- 2 Change **100** to **2** for a quick test. This rounded-top event stands on its own.
- 3 Click **Game**. Drag **game over** **inside** the block you just made.
- 4 Select **WIN**. Restart and catch 2 things. Then choose your real target, such as **15**.

Two blocks, two drawers - pink from **Info**, purple from **Game**.

YOU'LL KNOW IT WORKED

Reach your target and see **YOU WIN!**
Restore your chosen target after testing.

WATCH OUT

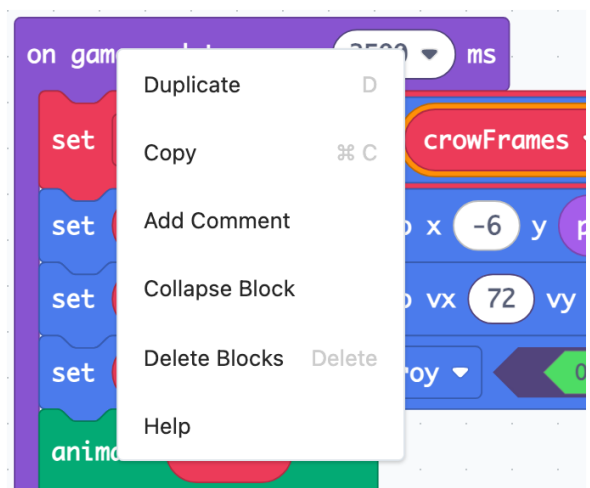

The purple block must sit **inside** the pink one, not underneath it.

TRY A CHALLENGE

Can a partner win in 30-60 seconds? Use their feedback to tune it.

Want more crows? Reuse the event and choose when they arrive.

- 1 Find the purple **on game update every 3500 ms** stack - the one with **crow** all the way through it.
- 2 Right-click the **purple bar at the very top**. Choose **Duplicate**.
- 3 The copy sticks to your mouse. Click an empty spot to drop it.
- 4 Change the copy's **3500** to something different. Try **2000**.

Right-click the **top bar**, not a block inside it - or you'll only copy one line.

YOU'LL KNOW IT WORKED

An extra stream of crows arrives. Is the game still fair and fun?

WATCH OUT

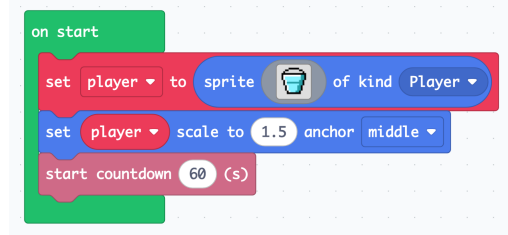

Copy the **whole event**. Ask your teacher to show the laptop's right-click gesture.

TRY A CHALLENGE

Change the timing or flight path. Can you make more crows feel fairer?

Choose ONE idea. Decide what you expect, then test it.

- Fifth item:** in **on start**, find the **loot** array. Click + at its bottom; draw in the new square. Test until your item falls.
- Bigger bucket:** from **Sprites**, put **set scale to** in **on start**, below player creation. Select **player** and **1.5**. Restart: is it bigger?
- Catch sound:** from **Music**, put **play sound** inside the existing **Player-Shiny overlap** event. Choose a sound and in **background**. Catch to hear it.
- Timer:** from **Info**, put **start countdown 60** in **on start**. Watch it count down. Reach your win target before zero, or you lose.

Add one image with the loot +.

YOU'LL KNOW IT WORKED

It does the thing you pictured in your head. If it doesn't - change **one** thing and press ► again. That's the whole job.

GOING FURTHER

Design a shield that blocks exactly one crow. Plan: what starts it, what remembers it, what shows it was used? Ask for a hint: event → variable → action.

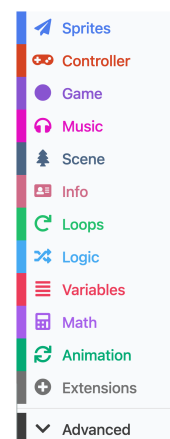

STUCK?

Read this first

SWOOP · KEEP THIS ONE OUT

Find the block, check its event, test again.

- **Can't find a block?** Use its **name, colour and shape**. Try toolbox search too.
- **Where does it go?** Action blocks go **inside an event**. Rounded-top events, such as **on start** and **on score**, stand on their own.
- **Unexpected result?** Undo your last change with **Ctrl + Z** (Mac: **Cmd + Z**). Restart and test.
- **Catcher disappeared?** Open its picture and draw solid pixels. Still stuck? Ask for a working checkpoint.

THE ONE HABIT WORTH TAKING HOME

Predict. Change one thing. Restart. Notice what happened. Decide what to try next.

Event outside. WIN action inside.
