

1

Make it yours

SWOOP · MISSION 1 OF 5

Right now it's my game. Two changes and it's yours.

- 1 In the green **on start** block, find **set player to sprite**. There's a tiny bucket sitting in it.
- 2 Click the tiny bucket. A drawing grid opens.
- 3 Draw whatever you want to catch with. Then hit the green **Done** button, bottom right.
- 4 Back on the blocks, find **set background color to**. Click the coloured circle and pick a new sky.

YOU'LL KNOW IT WORKED

Press ▶. Your thing is down the bottom, and the sky has changed.

WATCH OUT

The crow is **white**. Pick a dark sky or you won't see it coming.

FINISHED EARLY?

Use the whole 16×16 grid. Give it a face.

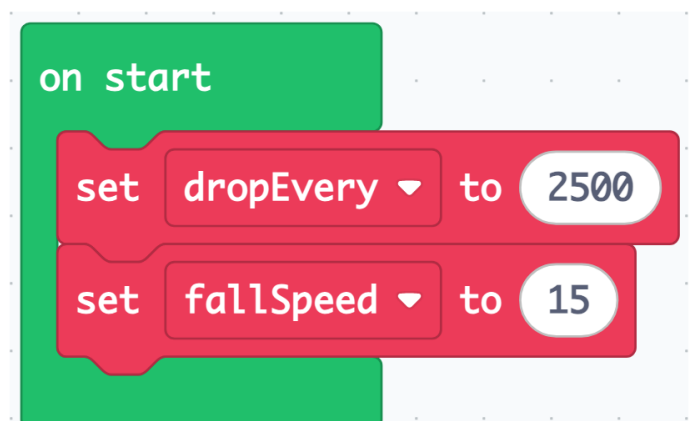

2

Fix the difficulty

SWOOP · MISSION 2 OF 5

The game is dull. Two numbers are wrong. You're going to fix them.

- 1 Look at the **very top** of **on start**. The first two red blocks. That's all you need today.
- 2 **dropEvery** is the wait between shiny things, in milliseconds. **2500** means one every 2.5 seconds — far too slow.
- 3 **fallSpeed** is how fast they drop. **15** is a slow drift.
- 4 Change both. Press ▶. Change them again. Keep going until it feels right.

Stuck for numbers? Try **700** and **60** — then beat your own score.

YOU'LL KNOW IT WORKED

You're busy. If you can stand still and still catch things, it's still too easy.

WATCH OUT

Change **one** number at a time, or you won't know which one did it.

FINISHED EARLY?

Break it on purpose. What's the smallest **dropEvery** that's still playable?

Right now you can only lose. Give the player a way to win.

- 1 Click **Info** in the toolbox. Drag out **on score 100** and drop it on an empty part of the workspace.
- 2 Click the **100** and type **15**.
- 3 Click **Game**. Drag **game over** **inside** the block you just made.
- 4 Check it says **WIN**, not LOSE. Click the word to swap it.

Two blocks, two drawers — pink from **Info**, purple from **Game**.

YOU'LL KNOW IT WORKED

Catch 15 things and the screen says **YOU WIN!**

WATCH OUT

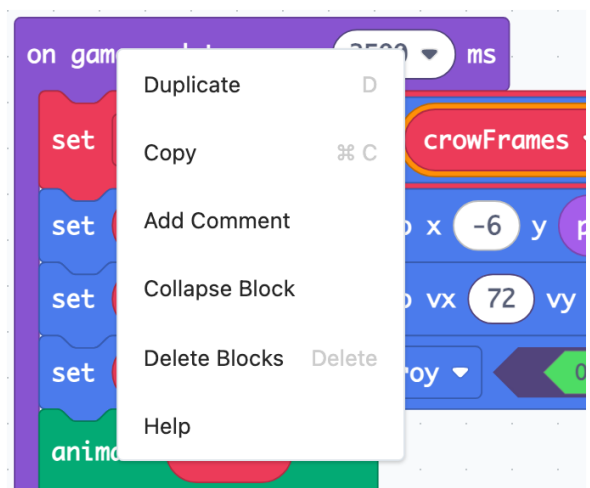

The purple block must sit **inside** the pink one, not underneath it.

FINISHED EARLY?

Tune it. Change 15 until winning takes about a minute.

One crow isn't scary. You don't have to build a new one — copy the one that's already there.

- 1 Find the purple **on game update every 3500 ms** stack — the one with **crow** all the way through it.
- 2 Right-click the **purple bar at the very top**. Choose **Duplicate**.
- 3 The copy sticks to your mouse. Click an empty spot to drop it.
- 4 Change the copy's **3500** to something different. Try **2000**.

Right-click the **top bar**, not a block inside it — or you'll only copy one line.

YOU'LL KNOW IT WORKED

Two crows, arriving at different times. Noticeably harder.

WATCH OUT

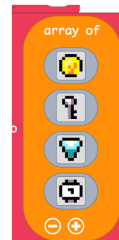

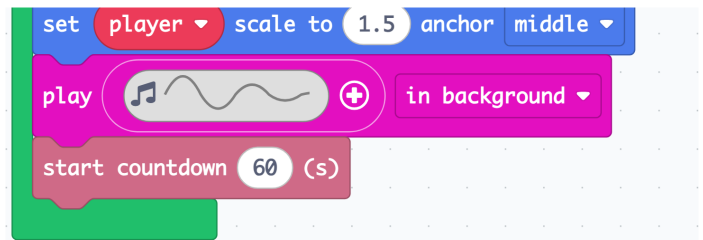

Send a crow from the right and it flies **backwards** — the picture only faces one way.

FINISHED EARLY?

In the copy, change **x** to **166** and **vx** to **-72**. Now fix the backwards bird.

It's your game now. Pick one of these — or ignore all four and do your own.

- A fifth shiny thing.** In **on start**, find the tall orange **array of** block holding the four pictures. Click the ⊕ at its **bottom**, then draw into the empty square that appears.
- A bigger bucket.** **Sprites** → **set scale to** — the very last block in that drawer.
- A sound when you catch.** **Music** → **play sound**, dropped inside the catch block. Change **until done** to **in background**.
- Beat the clock.** **Info** → **start countdown**. Change 10 to 60.

Top three sit inside **on start**. The orange block on the left is the loot — its ⊕ is right at the bottom.

YOU'LL KNOW IT WORKED

It does the thing you pictured in your head. If it doesn't — change **one** thing and press ► again. That's the whole job.

GOING FURTHER

A helmet you can catch that blocks one swoop. A boss crow twice the size. Three birds. A high-score name. Put your hand up if you want help finding a block.

STUCK?

Read this first

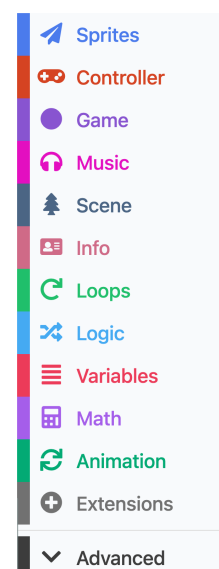

SWOOP · KEEP THIS ONE OUT

Nearly every problem today is one of these four.

- **Can't find a block?** Hunt by **colour**, not by name. Every block is the colour of the drawer it came out of. →
- **Nothing happened?** Check the block is actually **joined on** — dragged until it clicks. A block floating on its own does nothing.
- **Broke it?** **Ctrl+Z** undoes it. Press it as many times as you need.
- **Really broke it?** Nothing you do here can wreck anything. Hand up and we'll put it back.

THE ONE HABIT WORTH TAKING HOME

Change one thing. Press ►. Look at what happened. Then change the next thing. Changing five things at once is how you end up lost.

The toolbox, down the left of the screen.
